

Weather instruments

There are many different aspects to weather and weather can be measured using a variety of different tools. Have a look at these weather instruments. Find out what aspect of the weather they measure and what unit of measurement they use.

Anemometer

Measures:
Unit of measurement:

Helograph

Measures:
Unit of measurement:

Rain gauge

Measures:
Unit of measurement:

Stevenson screen

Measures:
Unit of measurement:

Wind vane

Measures:
Unit of measurement:

Wind sock

Measures:
Unit of measurement:

Weather instruments

Handheld anemometer

Measures:
Unit of measurement:

Thermograph

Measures:
Unit of measurement:

Six max and min thermometer

Measures:
Unit of measurement:

Wet dry bulb thermometer

Measures:
Unit of measurement:

Weather balloon

Measures:
Unit of measurement:

Aneroid barometer

Measures:
Unit of measurement:

These instruments can be used to measure the weather and the data that we get using these instruments can give us the climate for a particular region. Explain what you understand the difference is between weather and climate.
